Video Analysis Program Installation Instructions

1. Install MatLab runtime library version 9.6
   a. It can be freely downloaded from
      https://www.mathworks.com/products/compiler/matlab-runtime.html
2. Copy the Ratalyzer.exe program to your local computer where you would like your working directory to be
3. Ensure that the folder contains the executable and a folder called 'Videos' or 'videos' where the program will look for your videos. This is also the directory that the results will be saved as well.
4. You can now either run the executable or create a shortcut to the executable to run from the desktop etc. (but refrain from removing it from the original folder)

If there are video formats you'd like to play that are not working due to missing codecs, I recommend downloading this codec package.
